                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a BCMA (not defined) polypeptide. BCMA

is a necrosis factor (NF) kB activator. The method of the invention is

used to identify compounds which modulate BCMA activity (and thus NF-kB

activity). The specification describes a method of identifying a

polypeptide which increases gene expression from a promoter. The method

involves contacting a library of with a cell which expresses a

recombinant anti-cell death gene and a reporter gene operably linked to

the promoter, and then determining whether the expression of the

reporter gene is altered as a result of contact with library. The method

is useful for identifying polypeptides which increase or decrease gene

expression from a promoter. The BCMA polypeptide or nucleic acid are

useful for preparing a pharmaceutical composition for treating cancer,

apoptosis, viral infections, inflammatory response, such as rheumatoid

arthritis, inflammatory bowel disease or septic shock. BCMA is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The ztnf4 activity and BR43x2, TACI or BCMA receptor-ligand engagement is associated with asthma, bronchitis, emphysema, end stage renal failure, glomerulonephritis, vasculitis, nephritis, pyelonephritis, renal neoplasms, multiple myelones, lymphomas, light chain neuropathy, amyloidosis, moderating immune response, immunosuppression, graft rejection, graft versus host disease, inflammation, insulin dependent diabetes mellitus, Crohn's disease, joint pain, swelling, anaemia, or septic shock BR43x2, TACI, and BCMA polypeptides, fusions, antibodies, agonists or anaegonists can be used to treat hypertension, renal artery
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a human BCMA protein, a B cell protein related to transmembrane activator and CAMI-interactor (TACI) receptor. TACI is a tumour necrosis factor (TACI), Taceptor. The extracellular domains of BR43x2 (an isoform of TACI), TACI or BCMA (a related B cell protein) receptor contain a cysteine rich domain, and are used for inhibiting ztnf4 activity. Ztnf4 is a TMF ligand. They may also be used for inhibiting BR43x2, TACI or BCMA receptor-ligand engagement associated with activated or resting B lymphocytes, effector T-cells, or with antibody production. The antibody production is associated with an antibody production. The activated from a production is associated with an activated collected from a production is associated with an activated collected from a production is associated with an activated collected from a production is associated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure;

The method is useful for treating pathological conditions or diseases associated with increased TALL-1 and APRIL expression or activity TALL-1 and APRIL antagonists are used to block the interaction between APRIL and TALL-1 with TACI or BCMA. They are useful for treating a mammal suffering from cancer such as leukaemia, lymphoma, myeloma, cancers of lung and colon and autoimmune diseases e.g. rheumatoid arthritis, multiple sclerosis, psoriasis and lupus erythematosus. The present sequence is human process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human;

CC disease, renal disorders, B-cell lympho-proliferation, cardiovascular Cdiseases, renal disorders, B-cell lympho-prolifers, B-cell lympho-prolifers, B-cell lympho-prolifers, B-cell lympho-prolifers, B-cell lympho-proliferation, and disorders, B-cell lympho-proliferation such as cancer or CC carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, CC prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's CC disease, systemic lupus erythematosus-SLE); hypertension, cardiovascular CC diseases, renal disorders, B-cell lympho-proliferative disorders, CC lumunosuppressive diseases, organ transplantation, inflammation and CC human immunodeficiency virus (HIV), and for treating, suppressing or CC altering an immune response involving a signalling pathway between CC APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy. CC The present sequence is human APRIL-R also referred as BCMA or CC BCM protein.

The invention relates to the use of a BAFF receptor (BAFF-R, also known CC as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of CC the TNF (tumour necrosis factor) family, acting as an immunoregulatory CC agent, and also plays a role in the development of hypertension and CC related disorders. BAFF-R, fusion proteins containing it, and BAFF-R, CC specific antibodies can be used for inhibiting B-cell growth dendritic CC cell-induced B-cell growth and maturation, and immunoglobulin production, CC and in the treatment of autoimmune disorders, B-cell lymphoproliferative CC disorders, hypertension and renal disorders. The BAFF-R proteins may also CC be used in the treatment of immunosuppressive disorders and HIV confection, and in patients undergoing organ transplantation. The BAFF-R pecific antibodies may be used for treating, CC suppressing or altering an immune response involving a signalling pathway CC between BAFF-R and BAFF, thereby inhibiting inflammation. Since BAFF-R

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               molecules, proteins (including homologues), and their antibodies. The invention in particular relates to methods for regulating the interaction between TaLL-1 and TaLL-1 receptors (BMA referred as B cell maturation factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TaLL-1 protein is useful for identifying compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes mellitus, multiple sclerosis, myasthenia gravis, Grave's disease, autoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, condent in the section of the sec

The present sequence is a human B cell maturation factor (BCMA) protein. It is the receptor for TALL-1 protein. BCMA gene is located on chromosome 16. In human tissues, BCMA is expressed by located on chromosome but not by brain, muscle, heart, lung, k1 pancreas, testis and placenta. BCMA mRNA is absent in the pro-B lymphocyte stage but its expression increases with B lymphocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, post-streptococcal glomerulonephritis, or polyarteritis nodosa.                                                                                                                                                                                                                                                                                                                                                          antirheumatic, antiarthritic, antiasthmatic, nephrotropic and hypotensive CC activities, and can be used in gene therapy. (I) can be used for CC inhibiting, in a mammal, the activity of a ligand that binds Ithri? CC (e.g. INFA), for treating disorders and diseases associated with B CC lymphocytes, activated B lymphocytes or resting B lymphocytes, and for CC inhibiting the proliferation of tumour cells. (I) is useful for treating CC autoimmune disorders such as systemic lupus erythematosus, myasthenia CC gravis, multiple sclerosis, insulin dependent diabetes mellitus, asthma, CC rheumatoid arthritis, bronchitis, emphysema and end stage renal failure CC or renal disease such as glomerulonephritis, vasculitis, chronic lymphoid CC leukaemia, nephritis, and pyelonephritis, and for treating renal CC neoplasms, multiple myelomas, lymphomas, light chain neuropathy, or CC amyloidosis, hypertension, large vessel diseases, graft-versus host CC disease, graft rejection and Crohn's disease, (I) is useful for CC disease, graft rejection and Crohn's disease. (I) is useful for CC development, for modulating the immune system, for regulating B cell responses and CC communication. The present sequence represents a protein which is CC given in the exemplification of the present invention.

                                                                               CC protein (BCMA) activity in a mammal. The method comprises administering CC a specific binding partner for ARRIL (370, a tumour necrosis factor TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC BCMA extracellular consensus sequence, but not the extracellular region CC of TACI or BCMA. The method is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC lymphoproliferative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC diseases, optication of the series (asthma, hypersensitivity lung CC disease), drug and insect sting allergy, inflammatory bowel disease (CC conn's disease, colitis), scieroderma, autoimmune disease (multiple scierosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leurocyte infilitration of the autor of the series of the content of the series of the content of

The invention relates to the use of a BAFF receptor (BAFF-R, also known as BCMA) protein, or a BAFF-R fusion protein as an agent for the treatment of a variety of immune-related disorders. BAFF-R is a member of the TNF (tumour necrosis factor) family, acting as an immunoregulatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The present sequence represents a BCMA (not defined) polypeptide. BCMA
CC is a necrosis factor (NF) kB activator. The method of the invention is
CC used to identify compounds which modulate BCMA activity (and thus NF kB
CC activity). The specification describes a method of identifying a
CC polypeptide which increases gene expression from a promoter. The method
CC involves contacting a library of with a cell which expresses a
CC recombinant anti-cell death gene and a reporter gene operably linked to
CC the promoter, and then determining whether the expression of the
CC reporter gene is altered as a result of contact with library. The method
CC is useful for identifying polypeptides which increase or decrease gene
CC expression from a promoter. The BCMA polypeptide or nucleic acid are
CC useful for preparing a pharmaceutical composition for treating cancer,
CC apoptosis, viral infections, inflammatory response, such as rheumatoid
CC identifying compounds that modulate NF-kB expression and thus for drug
CC designing.

                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to Tumour necrosis factor (TNF) and CC Apol-related Leucocyte expressed Ligand 1 (TALL-1) nucleic acid colored molecules, proteins (including homologues), and their antibodies. The CC invention in particular relates to methods for regulating the colored interaction between TALL-1 and TALL-1 receptors (BCMA referred as B cell cometuration factor) to regulate monocyte, macrophage and B lymphocyte mediated immune responses. TALL-1 protein is useful for identifying CC compounds that regulate B lymphocyte proliferation. It is also useful for treating B lymphocyte associated autoimmune disorders like rheumatoid cc arthritis, systemic lupus erythematosus (SLE), insulin dependent diabetes cautoimmune haemolytic anaemia, autoimmune thrombocytopenia purpura, CC Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, CC Goodpasture's syndrome, pemphigus vulgaris, acute rheumatic fever, CC The TALL-1 protein and its corresponding nucleic acid sequence are also cuseful in diamonatic namava

                                                                                                                                                                                                                   The invention relates to a method for inhibiting TACI (transmembrane CC activator and intracellular CAML interactor) and/or B cell maturation extivator and intracellular CAML interactor) and/or B cell maturation CC protein (BCMA) activity in a mammal. The method comprises administering CC aspecific binding partner for APRIL (G70, a tumour necrosis factor-TNF CC family ligand), having the consensus region of TACI, BCMA, or the TACI/CC activation of the consensus sequence, but not the extracellular region CC and/or BCMA in a mammal which is useful for inhibiting activity of TACI CC and/or BCMA in a mammal which is useful for treating B-cell or T-cell CC (treative disorders, one or more solid tumours such as lung, CC gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI CC antagonists are useful for treating inflammation and immune function CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic CC disease, collitis), scheroderma, autoimmune disease (multiple Scherosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer country infilarration of the attin or cranse The present commence.
                                                                                                                                    Matches
                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor
                                                                                                                                                                                                                 Sequence

protein (BCMA) activity in a mammal. The method comprises administering a specific binding partner for APRIL (G70, a tumour necrosis factor TNF family 11gand), having the consensus region of TACI, BCMA, or the TACI/BCMA extracellular consensus sequence, but not the extracellular region of TACI on BCMA. The method is useful for inhibiting activity of TACI and/or BCMA in a mammal which is useful for treating B-cell or T-cell lymphoproliferative disorders, one or more solid tumours such as lung, gastrointestinal, pancreatic or prostate tumour. APRIL, BCMA and TACI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          cytostatic; B cell maturation protein; BCMA; tumour necrosis factor; TNF; lymphoproliferative disorder; tumour; lung; gastrointestinal; pancreatic; prostate; inflammation; immune disorder; diarrhoea; psoriasis; collitis; drug allergy; dermatitis; pneumonia; asthma; inflammatory bowel disease;

                                   (Crohn's disease, colitis), scleroderma, autoimmune disease (multiple terosis, rheumatoid arthritis, systemic lupus erythematosus), fungal, bacterial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucceyte infiltration of the skin or organs. The present sequence is human BCMA cysteine-rich extracellular region.
                                                                                                                                    antagonists are useful for treating inflammation and immune function diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic dermatitis, respiratory allergic disease (asthma, hypersensitivity lung disease), drug and insect sting allergy, inflammatory bowel disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inhibiting activity of B cell maturation protein and/or transmembrane activator and intracellular cyclophilin ligand interactor, by administering a binding partner for APRIL, a tumor necrosis factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Crobn's disease; scleroderma; autoimmune disease; multiple sclerosis; human immunodeficiency virus; HIV; systemic lupus erythematosus; cancer; rheumatoid arthritis; atherosclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human B cell maturation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             12-MAR-2002

                                                        The invention relates to a method for inhibiting TACI (transmembrane calcivator and intracellular CAML interactor) and/or B cell maturation correction (BCMA) activity in a mammal. The method comprises administering protein (BCMA) activity in a mammal. The method comprises administering calcivation (BCMA) activity in a mammal. The method comprises administering calcivity in a section of TACI, BCMA, or the TACI/ BCMA extracellular consensus region of TACI, BCMA, or the TACI/ BCMA extracellular consensus sequence, but not the extracellular region conformation of TACI or BCMA, in a mammal which is useful for treating activity of TACI cand/or BCMA, in a mammal which is useful for treating Bcell or T-cell cand/or BCMA in a mammal which is useful for treating Bcell or T-cell candyor BCMA in a mammal which is useful for treating Bcell or T-cell cantagonists are useful for treating inflammation and insume function continuous such as diarrhoea, psoriasis, allergies, pneumonia, atopic diseases such as diarrhoea, psoriasis, allergies, pneumonia, atopic constantitis, respiratory allergic disease (asthma, hypersensitivity lung consensus), fungal, seclesses, drug and insect sting allergy, inflammatory bowel disease (Conn's disease, colitis), scleroderma, autoimmune disease (multiple contensus), fungal, attractial, protozoal and viral infections (HIV), atherosclerosis, cancer with leucocyte infiltration of the skin or organs. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

disenses, renal disorders, B-cell lympho-proliferative disorders, immunosuppressive diseases, organ transplantation, inflammation and human immunodeficiency virus (HTV), and for treating, suppressing or altering an immune response involving a signalling pathway between APRIL-R and its ligand. APRIL-R DNA is also useful in gene therapy. The present sequence is a fusion construct containing human APRIL-R also referred as BCMA or BCM protein, Fc region of human immunoglobul G (IGG) and a signal sequence from murine Ig kappa cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                     associated with undesired cell proliferation such as cancer or carcinoma. The method involves administering a composition comprising A proliferation inducing Ligand Receptor (APRIL-R) also referred as B cell maturation protein (BEM or BCMA) antagonist that antagonises the interaction between APRIL and its cognate receptor(s). This method is useful for treating undesired cell proliferation such as cancer or carcinoma e.g. human lung carcinoma, colon carcinoma, breast carcinoma, prostate carcinoma, and other carcinomas whose proliferation is modulated by APRIL. It is also useful for treating autoimmune diseases (Grave's disease, systemic lugus erythematosus SLE); hypertension, cardiovascular itemates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  proliferation such as cancer or carcinoma, comprises administering composition comprising A Proliferation Inducing Ligand Receptor (APRIL-R) antagonist .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Fig 3B; 85pp; English
